

5-axis Diopter holder

The Vocas 5-axis Diopter holder accepts any 138 mm diopter and, with its flexible cuff, will fit any lens while preventing stray light.

The diopter holder gives you the possibility to adjust the pitch, roll, yaw, vertical and horizontal shift. These axes can be changed independently and run through the optical axis, which means the diopter's position to the lens will not change while tilted, rolled or rotated.

How to operate the 5-axis diopter holder?

Pitch adjustment:

Release the red winged nut (1), to adjust the pitch of the diopter.

Roll adjustment:

Release the red knob (2), to adjust the roll of the diopter.

Yaw adjustment:

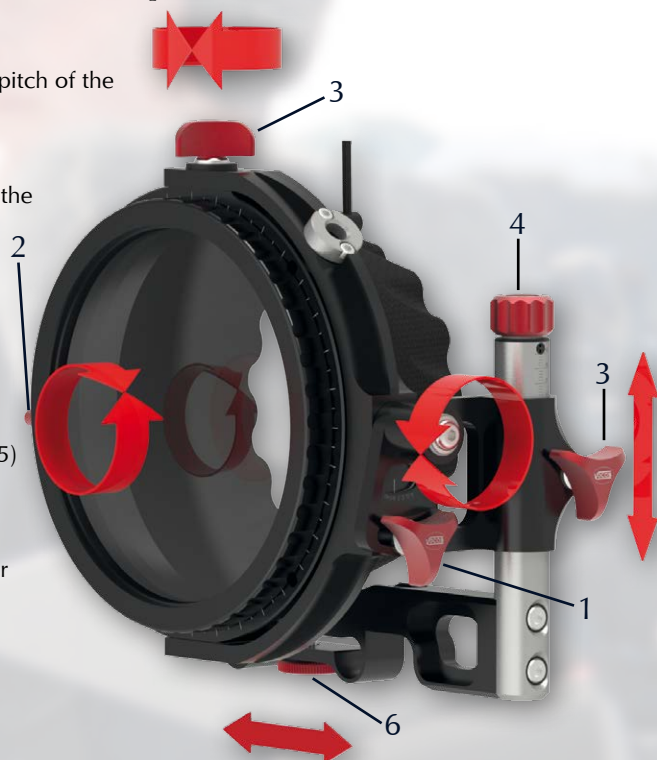

Release the red winged nut (3), to adjust the yaw of the diopter.

Height adjustment:

Release the red winged nut (4), rotate knob (5) to adjust the height of the diopter.

Lateral adjustment:

Release the red knob (6), to adjust the diopter laterally.

5-axis Diopter holder

The 5-axis diopter holder is ready to use on 15 mm rails. It allows you to enhance your creativity and enables you to shoot that previously impossible shot with adjusted and / or multiple focus planes.

0410-0100
